

PARFLEX 56 SERIES FITTINGS

With ToughShield® Plus Plating Technology

The new zinc-nickel (Zn-Ni) plating for Parflex 56 series fittings offers premium corrosion resistance, protecting equipment significantly longer than other commercially available plating technologies.

ToughShield® Plus

Parker engineers and metal scientists used state-of-the-art tools and analysis methods to study corrosion and how to minimize it. This led to the development of our patent-pending advanced plating which provides superior corrosion and assembly performance, even on products subjected to after plating deformation such as swivel nuts and other fluid power components.

Ensure more uptime with ToughShield Plus

No matter your industry, ToughShield Plus delivers.

- ✓ Extended fitting service life
- ✓ Less frequent and easier maintenance
- ✓ Reduced downtime
- ✓ Decreased corrosion migration to adjacent components
- ✓ Reduced warranty claims for manufacturers
- ✓ Decreased aesthetic quality concerns

Premium performance validation

The superior corrosion resistance of Parker's latest plating technology is validated through ASTM B117 / ISO 9227 neutral Salt Spray Testing (SST), as well as two Cyclical Corrosion Tests (CCT) - ISO 16701 and SAE J2334. CCT is widely considered to provide a closer correlation to field corrosion conditions. ToughShield Plus is the first standard plating system in the fluid power industry proven to offer this exceptional level of resistance to red rust. Download our whitepaper on www.toughshield.com to learn more.
