GL Plus Filter Series - Element Type ZLP

Unmatched energy savings and lowest total cost of ownership Ap 125 mbar

Independently validated & guaranteed performance over 12 month

Parker domnick hunter, High-performance GL-series filters, containing ZL grade filter elements are designed as depth-filters for the reliable remove of 1 µm solid particulate and exhibit a filtration performance of 99,925% in compressed air or compressed nitrogen gas. Innovative filter housing and filter element design leads to optimum flow characteristics at minimum pressure drops: This results in cost savings throughout the operating lifetime of the filter element at reliable levels of filtration performance.

Highly-efficient, borosilicate nano-fibre media with a voids volume of 96% ensures high dirt-holding capacity at constantly low differential pressure. This efficiency is additionally supported by deep-pleating technology enabling 4.5 times more effective filtration surface area when compared with conventional filter elements.

The light-weight, compact construction, ensures a requirement for minimum clearance below the filter bowl for element removal. The simple method of installing the filter element into the filter bowl, in conjunction with a secure, airtight housing closure avoids installation errors and prevents by-pass between the contaminated and clean enclosures. The inlet-port is clearly marked by an aluminium feature above and below the opening signifying the correct direction of flow through the filter element.

- 1: Port size as per DIN ISO 228 (BSP-P) or ANSI B 1.20.1 (NPT-F)
- 2: Flow rates in m³/h related to 1 bar_a and 20 °C, compressed to 7 bar_e. Where the minimum operating pressure deviates, the actual flow rate must be multiplied with the respective correction factor f (see the respective table) to determine the required nominal flow rate and the appropriately required filter model.

Scope of supply:

Ready-to-install filter, complete with filter element and float drain PD15NO; optional available with differential pressure gauge ZD90GL, with manual drain HV15 or without a drain (in this case, not ready-to-install).

GL Plus Filter Series - Element Type ZLP

Materials Housing

Upper/lower housing	Aluminium alloy with alochrome coating, outside powder coating
Sealing materials	NBR

Materials Element

Filter fleece	Borosilicate nanofibre, surface coated
Supporting net	Polypropylene
Outer sleeve	Polyester fibre, surface coated
Support screens	Stainless steel
End caps	Glass fibre reinforced polyamide
Adhesive	Epoxy resin
Sealing materials	NBR

Area of application Filter

Max. operat. pressure	16 bar _e	with float drain, with differential pressure gauge
	20 bar _e	with manual drain or without drain, without differential pressure gauge
Operating temperature	1.5 to 80 °C	with float drain, with differential pressure gauge
	1.5 to 100 °C	with manual drain or without drain, without differential pressure

Performance data Element

Flow medium	Compressed air and gaseous nitrogen
Filtration	Liquid and solid particulate
Flow direction	from inside to outside
Upstream filter required	WS (in case of wall flow)
Particle size	1 μm
Aerosol intake contents	40 mg/m³
Residual aerosol cont.	0,5 mg/m³
Filtration performance	99,925 %
Differential press., dry	< 70 mbar _e
Differential press., saturated	< 125 mbar _e

Quality assurance and warranty

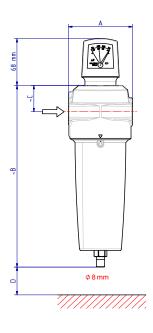

R&D, Manufacturing	DIN EN ISO 9001, DIN EN ISO 14001
Validation	ISO 12500-1, ISO 8573-2, ISO 8573-4, ISO 8573-1:2010 [2:-:3]
Element	12 months guaranteed filtration performance in line with filter element service-life
Housing	Corrosion warranty limited to the maximum housing lifetime of 10 years.
