The direct operated valves series D3W with inductive position control are typically used in safety relevant applications. The start or the end position can be monitored.

The fail-safe position of the directional valve during power failure is the spring offset position.

Please find detailed information on the machine directive in the position paper in chapter 1.

The adjustment of the position control is factory set and sealed. Replacement and repairs can only be

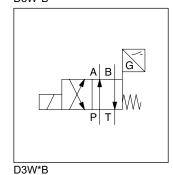

undertaken by the manufacturer.

<sup>1)</sup> Only guaranted with screened cable and female connector

#### M12 pin assignment

Outputs: Open collector

#### **Definitions**

Start position monitored:

The valve is de-energized. The inductive switch gives a signal at the moment when the spool leaves the spring offset position (below 15 % spool stroke).

At the switching point the spool is located within the closed position. It is secured that only the flow paths of the offset position are granted.

End position monitored:

The inductive switch gives a signal before the end position is reached (above 85 % spool stroke).

The switch can only be located on the opposite side of the solenoid for direct operated valves. Please order plug M12x1 separately (see accessories, plug M12x1; order no.: 5004109).

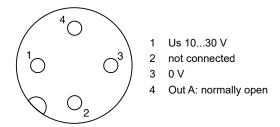

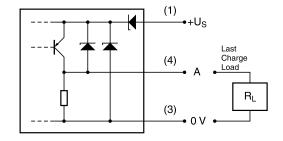

#### **Double solenoid valves**

#### Electrical characteristics of position control as per IEC 61076-2-101 (M12x1)

| Protection class                       |        | IP65 in accordance with EN 60529 (with correctly mounted plug-in connector) |
|--|--------|---|

| Supply voltage Us / ripple             | [V]    | 1030 / ±10 %  |
| Current consumption without load       | [mA]   | ≤10   |
| Max. output current per channel, ohmic | [mA]   | 200   |
| Min. output load per channel, ohmic    | [kOhm] | 100   |
| Max. output drop at 0.2 A              | [V]    | ≤2  |
| EMC                                    |        | EN61000-6-4 / EN61000-6-2   |
| Min. distance to next AC solenoid      | [m]    | >0.1  |
| Interface                              |        | M12x1 acc. to IEC 61076-2-101   |
| Wiring min.                            | [mm²]  | 3 x 0.14 brad shield recommended  |
| Wiring length max.                     | [m]    | 50 recommended  |

#### M12 pin assignment

#### **Definitions**

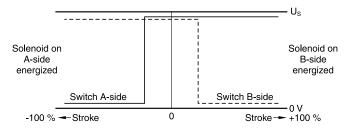

Start position monitored:

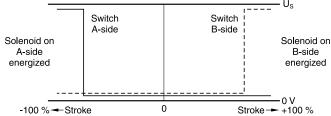

The valve is de-energized. The inductive switch gives a signal at the moment when the spool leaves the center position (below 15 % spool stroke).

At the switching point the spool is located within the closed position. It is secured that only the flow paths of the offset position are granted.

## End position monitored:

The inductive switch gives a signal before the end position is reached (above 85 % spool stroke).

Please order plug M12 x 1 separately. Straight plug recommended – no defined position possible for angled plug.

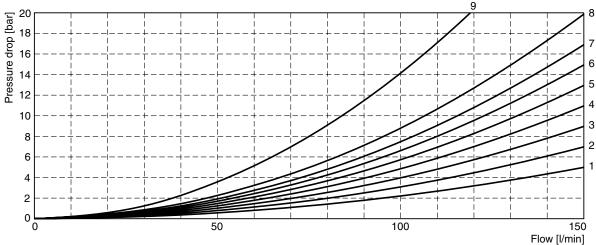

#### **Performance Curves**

The flow curve diagram shows the flow versus pressure drop curves for all spool types. The relevant curve number

for each spool type, operating position and flow direction is given in the table below.

|       | Position b |            | Position a |      | Position 0 |      |      |      |      |      |
|-------|------------|------------|------------|------|------------|------|------|------|------|------|

#### Flow curve diagram

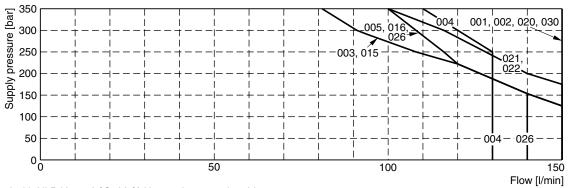

All characteristic curves measured with HLP46 at 50 °C.

#### Shift limit diagram

The diagram below specifies the shift limits. Valves with spool position "F" or "M" can only be operated up to 70 % of the limits. The specifications apply to a viscosity of 40 mm²/s and balanced flow conditions. The shift limits can

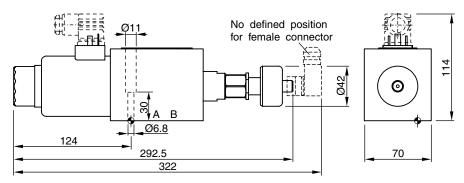

be considerably lower at unbalanced flow conditions. To avoid flow rates beyond the shift limits, a plug-in orifice can be inserted in the P-port.

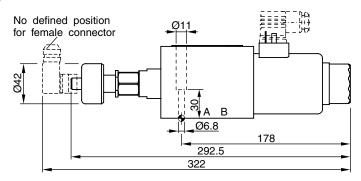

Measured with HLP46 at 50 °C, 90 %  $U_{\rm nom}$  and warm solenoids.

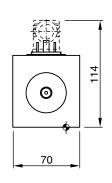

## Interface EN 175301-803, DC solenoid, without plug M12x1<sup>1)</sup> B, E, F -style

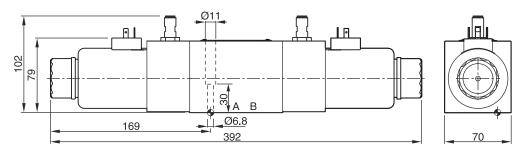

#### H, K, M -style

| √R <sub>max</sub> 6.3 | BK385 | 4x M6x40<br>ISO 4762-12.9 | 13.2 Nm<br>±15 % | <b>NBR: SK-D3W-30</b><br>FPM: SK-D3W-V-30 |

The space necessary to remove the plug per EN 175301-803, design type AF is at least 15 mm.

The torque for the screw M3 of the plug has to be 0.5 to 0.6 Nm.

The space necessary to remove the M12x1 female connector is at least 22 mm.

#### Attention:

The adjustment of the position control is factory set and sealed. Replacement and repairs can only be undertaken by the manufacturer.

<sup>&</sup>lt;sup>1)</sup> Please order plug M12x1 separately (see accessories, plug M12x1; order no.: 5004109).

<sup>&</sup>lt;sup>2)</sup> Please order plug M12x1 separately. Straight plug recommended - no defined position possible for angled plug.
