Subject to alteration without prior notice. The curves and diagrams in this catalogue are typical examples only. While the contents of the catalogue are updated continuously, the validity of the information given should always be confirmed. For more detailed information, please contact Parker Hannifin.

**WARNING – USER RESPONSIBILITY**

**FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.**

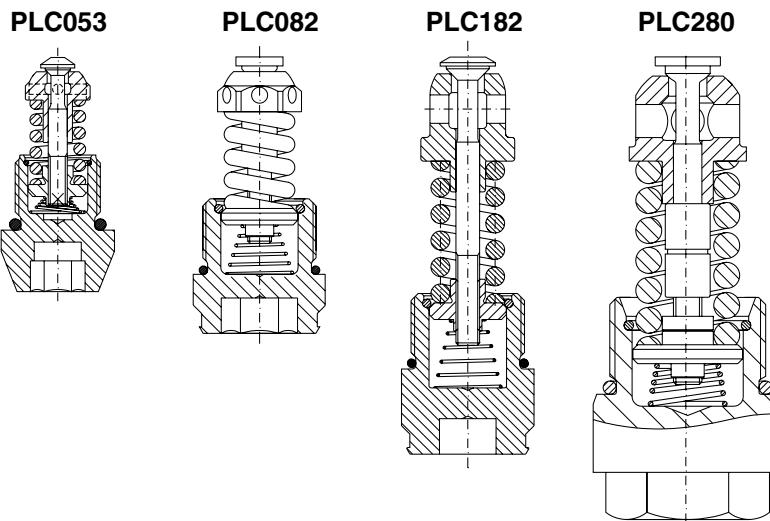

This document and other information from Parker-Hannifin Corporation, its subsidiaries and authorized distributors provide product or system options for further investigation by users having technical expertise.

The user, through its own analysis and testing, is solely responsible for making the final selection of the system and components and assuring that all performance, endurance, maintenance, safety and warning requirements of the application are met. The user must analyze all aspects of the application, follow applicable industry standards, and follow the information concerning the product in the current product catalog and in any other materials provided from Parker or its subsidiaries or authorized distributors.

To the extent that Parker or its subsidiaries or authorized distributors provide component or system options based upon data or specifications provided by the user, the user is responsible for determining that such data and specifications are suitable and sufficient for all applications and reasonably foreseeable uses of the components or systems.

**Offer of Sale**

Please contact your Parker representation for a detailed "Offer of Sale".

The PLC series auxiliary valves are direct-acting, factory-set pressure relief valves. The insert type cartridge can be supplied with or without a threaded plug. They can also be supplied with housings to facilitate in-line installation.

PLC valves are intended primarily to act as combined pressure-relief and anti-cavitation valves - otherwise known as service port relief valves used in mobile directional controls. They can be also used in manifolds or line mounted port bodies for any over pressure protection in four different cavity sizes. PLC cartridge valves are purchased in large quantities by several of the world's leading pump and transmission manufacturers.

## **Construction and function**

PLC pressure relief valves are made of high-strength steel and consist of a seat, poppet, spring and nut. After the pressure setting has been made, the damper nut is locked against the poppet by welding, in order to prevent the factory-set opening value from changing. When the cartridge is supplied with a plug, a spring is included to enable the cartridge to function as an anti-cavitation valve. The anti-cavitation valve is essentially a check valve that enables oil to be sucked from the tank line in order to prevent cavitation in a consumer.

Poppets without a pressure relief function are also available. They are used when only a 'check valve' is required to perform the anti-cavitation function.

## **Technical data**

### **Flow capacity**

The flow capacities of the respective PLC valves are dependent on the extent of pressure rise that can be accepted, and are illustrated in the typical graphs that begin

overleaf. The nominal flow capacities, however, are as follows:

|        |           |
|--------|-----------|
| PLC053 | 50 l/min  |
| PLC082 | 80 l/min  |
| PLC182 | 180 l/min |
| PLC280 | 280 l/min |

### **Pressure-setting flow**

As standard, the desired pressure is set with a flow of 20 l/min passing through the pressure relief valve. The exception is the PLC053, for which the pressure setting is made with a flow of 10 l/min passing through the valve.

### **Weights**

|        |          |
|--------|----------|
| PLC053 | 0,06 kg  |
| PLC082 | 0,11 kg  |
| PLC182 | 0,165 kg |
| PLC280 | 0,39 kg  |

The PLC valves are all supplied with a threaded plug.

Housing for PLC082 cartridge  
(inclusive of cartridge) 1,6 kg

Housing for two PLC082 cartridges  
(inclusive of cartridges) 2,8 kg

### **Hydraulic fluids**

Best performance is obtained using mineral-base oil of high quality and cleanliness in the hydraulic system.

Hydraulic fluids of type HLP (DIN 51524), oil for automatic gearboxes Type A and engine oil type API CD can be used.

Synthetic, fire-resistant and environmentally friendly oils can also be used. If in doubt about the suitability of an oil, please contact your nearest Parker representative for advice.

For best function, oil viscosity should be between 15 and 45 mm<sup>2</sup>/s (cSt).

### **Filtration**

Filtration should be arranged so that Target Contamination Class 20/18/14 according to ISO 4406 is not exceeded.

### **Temperature**

Temperature range, fluid:

-20 °C to +90 °C

Temperature range, ambient:

-40 °C to +60 °C

Temperature shock resistance:  
max. 100 °C/second

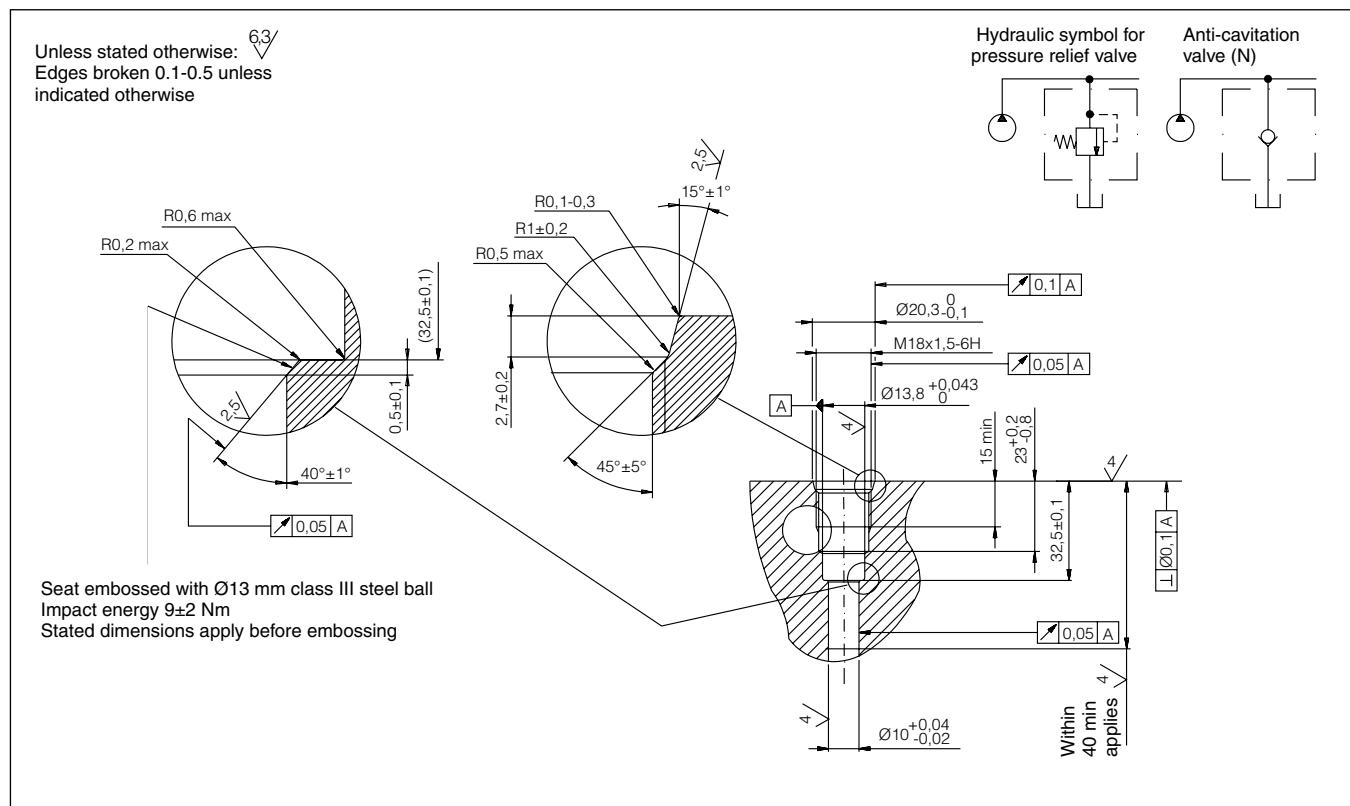

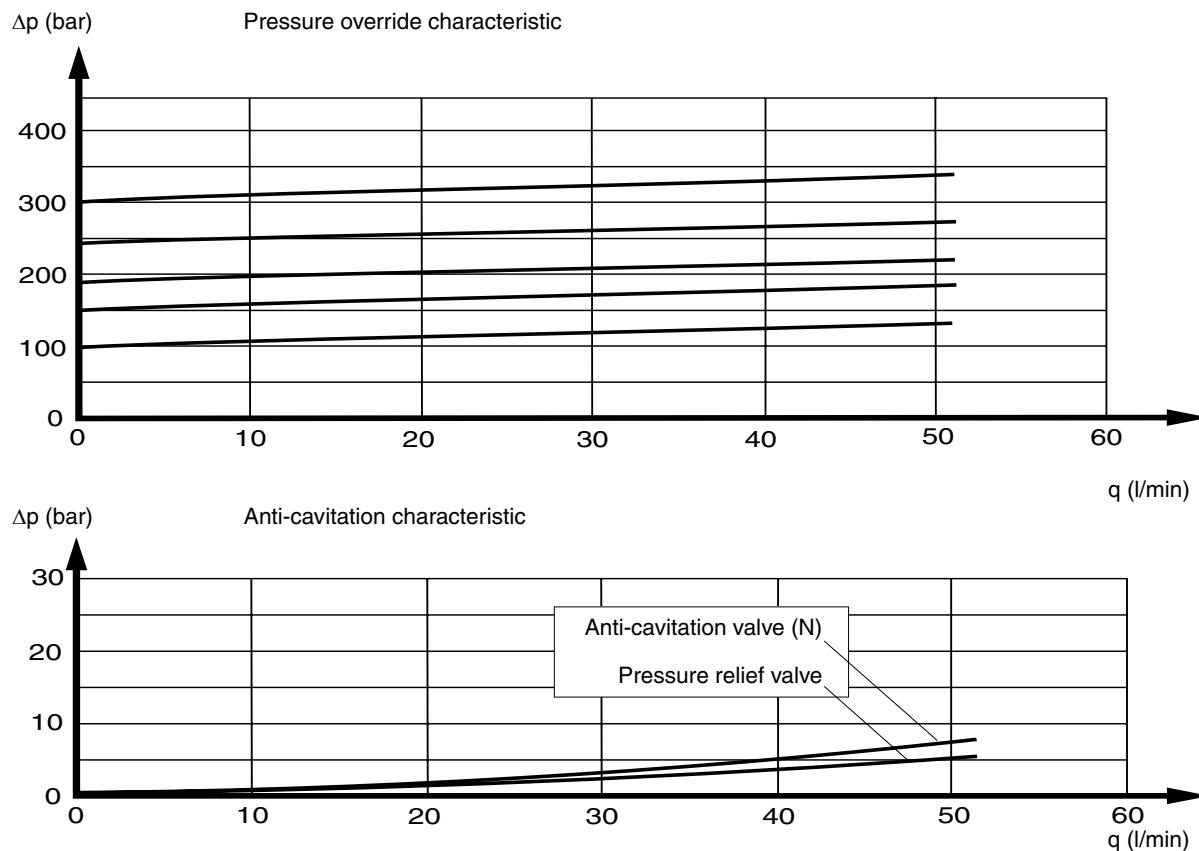

### **General**

The data given in this catalogue is applicable at an oil temperature of 50 °C and viscosity of 30 mm<sup>2</sup>/s (cSt) using mineral oil complying with DIN 51524, with the cartridge valve is installed in a test manifold.

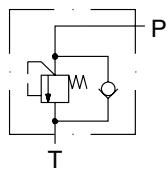

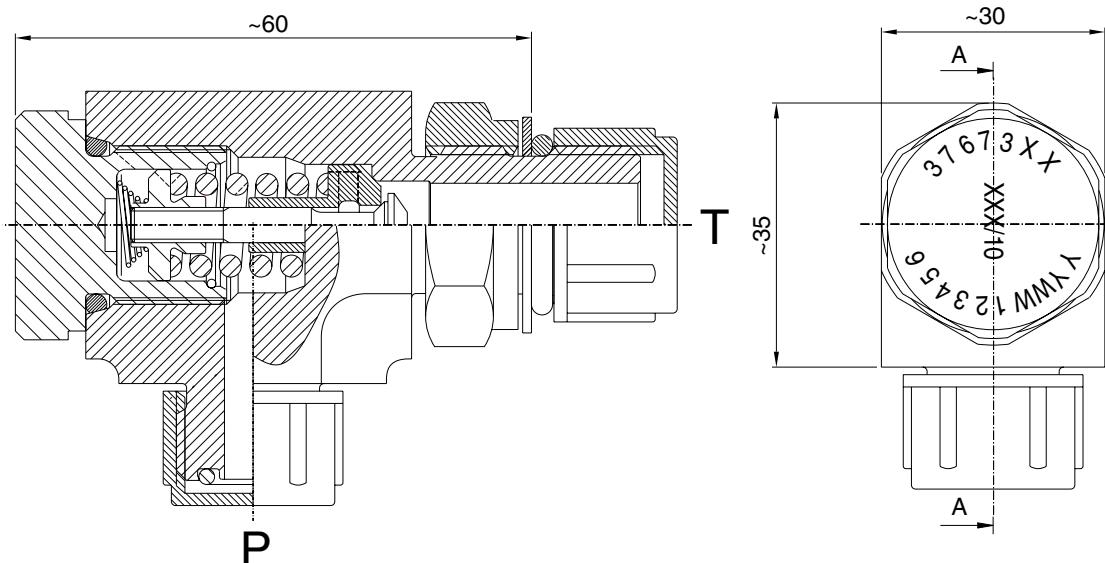

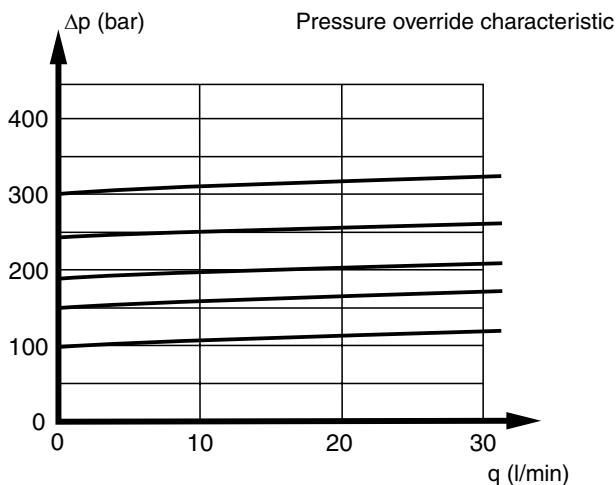

### **Features and benefits**

- Small dimensions - easy to install
- Single unit - facilitates installation
- Very tight - no unnecessary leakage losses
- Good characteristic – small pressure change between different flows
- Good opening and closing characteristics – distinct opening and closing
- Low hysteresis – good precision in pressure maintenance
- Fast acting – reacts quickly to pressure surges
- Setting locked by welding – prevents undesirable changing of pressure setting
