

Subplate mounted sequence valves series R4S enable a hydraulic system to operate in a pressure sequence. When the system pressure reaches the setting pressure the valve opens and permits flow to the secondary sub-system.

**Features**

- Pilot operated sequence valve
- Subplate mounting acc. to ISO 5781
- 3 pressure stages
- 3 adjustment modes:
  - hand knob
  - acorn nut with lead seal
  - cylinder lock

**Typical pressure characteristics at closing point**

P1 = setting pressure  
P2 = operating pressure

Time and pressure underlap depend on the characteristics of the specific system.
