## CRANKCASE BREATHER

### HEAVY-DUTY FILTRATION PROTECTION TO MEET TOUGH EMISSION STANDARDS

The Baldwin Filters' CV15010 crankcase breather, featuring proprietary PEACH® Media Technology, provides superior filtration of blow-by gases to reduce emissions.

Particulates and oil vapor enter the crankcase as a product of piston ring bypass or "blow-by" during the combustion process. The Baldwin CV15010 crankcase breather effectively captures blow-by oil vapors and returns the oil to the reservoir.

- **Proprietary PEACH Media Technology**  
Allows high flow and maximum efficiency
- **Heavy-Duty Ultrasonic Welded Frame**  
Provides structural durability

The PEACH Coalescing Element utilizes patented synthetic media layers bonded together to provide outstanding filtration protection, allowing for high flow and maximum efficiency. Inner, exposed layers of the media capture larger contaminants, while the deeper layers filter down to the 0.2 micron level.

Ultrasonic welding bonds plastic components together to ensure structural durability to withstand tough operating conditions.

With the Baldwin CV15010 your engine will meet ever-increasing emission regulations, while removing harmful oil mist and particulates that would otherwise be released into the air.

**For Cummins B6.7, ISB, ISL, L9 Engines and Paccar PX6, PX7 Engines**
