

# THIS IS IoT

PQDXXA-PROFINET-Z10

# PVplus

## Full Controllability

The PQDXXA-PROFINET-Z10 pump control module for all PVplus frame sizes enables your hydraulic system to control displacement, pressure, and power (torque) with superior and precise dynamic performance.

## Full Connectivity

The control module with the PROFINET interface feature enables full remote connectivity and ensures minimized installation and maintenance costs as well as reduced downtimes. Furthermore, the pump control is fully integrable into the machine control / HMI for full process transparency.

## Features

- Displacement, pressure and power (torque) control for all PVplus pumps
- Certified and proven PROFINET interface to PLC / overlaying machine control
- Easy to control, monitor, and parameterize via PROFINET interface
- Quick and easy integration into PLCs with online available function blocks for I/Os and parametrization
- Push-in contacts for quick and easy installation
- Network switch function with two RJ45 interfaces
