

Authorized Recertification Centres - UK

for Hydraulic Accumulators

The Pressure Systems Safety Regulations (PSSR) require that hydraulic systems containing gas-loaded accumulators are maintained safely within a Written Scheme of Examination. Parker Hannifin has developed a country wide network of trained competent persons within Authorized Recertification Centres.

Services include:-

- Preparation of Written Schemes of Examination
- Accumulator maintenance, testing and repair
- Hydraulic system troubleshooting

Parker Authorized Recertification Centres are fully trained and offer a wealth of experience in the Parker accumulator product range. Please contact any of the recertification centres detailed on the map.

Olaer Fawcett Christie was acquired by Parker Hannifin in July 2012, all of the Authorized Recertification Centres are able to recertify accumulators purchased before and after the Parker acquisition.
